01 · OVERVIEW

Executive Summary

This report presents the XII NOON digital experience — a multi-page cinematic website conceived as the digital expression of an ultra-luxury Indian timekeeping maison. The project delivers a sophisticated, narrative-driven web presence that translates the brand’s philosophy of sovereignty, scarcity, and permanence into an immersive online journey. Every element, from the typography to the scroll-driven animations, has been crafted to position XII NOON not as a participant in global luxury, but as a definer of it.

The website comprises eight distinct routes, each serving a specific purpose within the brand’s narrative architecture. The homepage establishes the maison’s manifesto through a full-screen hero, philosophical pillars, and the complete collection. Four dedicated product pages present each object — The Tricolor Edition, The Emirati Edition, The Signature, and The Vajra Pen — with detailed specifications, heritage storytelling, and cinematic scroll-sequence animations. Supporting pages for Brand Story, Media, and Private Enquiry complete the experience, culminating in a working enquiry system that captures and persists qualified interest.

Built on a modern technology stack (Next.js, TypeScript, Prisma), the site is fully responsive, accessible, and production-ready. It integrates a film-grain aesthetic, a custom gold cursor, scroll-progress indicators, and Ken Burns parallax imagery to deliver an experience commensurate with the objects it presents. This document outlines the design philosophy, technical architecture, feature set, and deployment guidance for the project.

“Not a response to the world of luxury — India’s assertion within it.”

— XII NOON Manifesto

Brand & Design Philosophy

Visual Language

The visual language of XII NOON draws from the architectural precision and ceremonial geometry of Bharat, translated into a digital medium with uncompromising exactitude. The palette is deliberately restrained: a deep matte black (#080704) serves as the canvas, against which a single accent of antique gold (#c9a84c) and a warm cream (#f0e8d5) carry all typography and interaction. This disciplined chromatic approach ensures that the objects — not the interface — remain the focus of attention at all times.

Typography pairs Cormorant Garamond, a high-contrast serif evoking editorial luxury, with Jost, a geometric sans-serif used for eyebrows, labels, and metadata. Wide letter-spacing on uppercase labels lends a ceremonial, almost architectural quality to the navigation and section headers. A persistent film-grain overlay and a custom gold cursor with a trailing ring introduce tactile, cinematic texture that distinguishes the experience from a conventional e-commerce interface.

The Three Pillars

The maison’ s philosophy is structured around three immovable pillars that govern both the brand and its digital expression. These are not marketing claims but operating principles, reflected in everything from the restricted production numbers to the gated enquiry process.

Pillar	Principle	Digital Expression
I	Production is Restricted	A finite allocation. The site never displays prices or stock counts; availability is conveyed only through private conversation.
II	Access is Controlled	No object is sold through the site. The Private Enquiry form gates all acquisition behind a reviewed, invitation-based process.
III	Ownership is Extended, Never Offered	The language throughout positions possession as a privilege conferred, not a transaction completed. The maison chooses its custodians.

These pillars inform every interaction design decision: the absence of a shopping cart, the emphasis on ‘extension’ over ‘purchase’ in all copy, and the deliberate friction

introduced by requiring a reviewed enquiry before any conversation about acquisition begins.

03 · ARCHITECTURE

Site Architecture & Navigation

The website is structured as a multi-page experience with eight routes, each purpose-built for a distinct stage of the brand narrative. Navigation is anchored by a persistent header that transitions from transparent to a frosted backdrop on scroll, ensuring legibility without sacrificing the immersive feel. A dedicated mobile drawer provides the full navigation on small screens, with numbered links and a prominent enquiry call-to-action.

Route	Purpose	Key Features
/	Homepage	Cinematic hero, marquee, philosophy, collection grid, craft, gallery, standards, Vajra teaser, enquiry
/tricolor	The Tricolor Edition	Product hero, story, heritage, cinematic scrub, specifications, highlights, related
/emirati-edition	The Emirati Edition	Product hero, story, heritage, specifications, highlights, related
/signature	The Signature	Product hero, story, heritage, specifications, highlights, related
/vajra-pen	The Vajra Pen	Product hero, story, heritage, cinematic scrub above specs, highlights, related
/brand-story	Brand Story	Manifesto, philosophy, craft, standards recap, closing statement
/media	Media Gallery	Bento-style gallery of all imagery with hover captions, viewing CTA
/private-enquiry	Private Enquiry	Full-page enquiry form with persistence, contact details, success state

Every route is server-rendered for performance and SEO, with metadata (title, description, Open Graph) tailored per page. A shared SiteShell wrapper ensures consistent chrome — film grain, custom cursor, scroll progress, navigation, and footer — across all pages, while allowing each page’s content to vary independently. All internal links use Next.js client-side navigation for instant, flicker-free transitions.

04 · COLLECTION

The Collection

The collection comprises four objects of permanence, each conceived as an heirloom rather than an acquisition. The homepage presents them in a responsive two-by-two grid with hover zoom and quick-view dialogs; dedicated pages provide the full narrative for each, including heritage, specifications, and a related-objects carousel that encourages exploration across the collection.

Object	Category	Edition	Defining Characteristic
The Tricolor Edition	The Watch	Limited to 12	Ashoka Chakra in platinum filigree; saffron sapphires, white diamonds, Colombian emeralds
The Emirati Edition	The Watch	Private allocation	Full pavé diamond case; Arabic geometric motifs cast in 18K gold
The Signature	The Watch	By invitation	Oval Colombian emerald dial; pavé diamond bezel; sculpted gold bracelet
The Vajra Pen	Writing Instrument	Numbered series	18K gold nib; hand-turned barrel; pavé diamond crown; Vajra thunderbolt motif

Product Page Structure

Each product page follows a consistent, considered structure designed to move the visitor from first impression to enquiry. A full-height page hero with breadcrumbs and the object’s name sits over the product image. The story section pairs the long description with a large product image and an ‘Enquire Privately’ call-to-action. A heritage section presents the cultural narrative against a blurred backdrop of the object. Specifications and highlights follow in a two-column layout, and a related-objects grid closes the page, encouraging cross-collection exploration.

Two of the four products — The Vajra Pen and, on the homepage, a Vajra teaser — feature the cinematic scroll-sequence animation described in the following section. The remaining two rely on the strength of their imagery and copy, ensuring variety in pacing across the collection.

05 · EXPERIENCE

Cinematic Scroll-Sequence Experience

The signature interaction of the XII NOON website is the cinematic scroll-sequence — a technique in which a tall, sticky section reveals text beats in precise choreography as the visitor scrolls, accompanied by a slowly zooming background and a gold progress bar. This approach, inspired by high-end editorial and film title sequences, transforms passive scrolling into an act of discovery, demanding attention and rewarding it with narrative revelation.

How It Works

Each cinematic section spans several viewport heights (typically 420–560vh) with a sticky inner container that remains fixed while the visitor scrolls through it. As scroll progress advances from zero to one, a series of ‘beats’ — headlines, subtitles, quotes, and outlined gold ‘ghost words’ — fade in and out using a trapezoidal easing curve: a quick eighteen-percent fade-in, a sixty-four-percent hold at full opacity, and a quick eighteen-percent fade-out, with a subtle vertical drift that lends weight to the motion. The background image scales from 1.08 to 1.24 across the section, producing a slow cinematic zoom.

A gold progress bar at the base of each section provides a discreet sense of position within the sequence. The brand name ‘XII NOON’ can be designated as a persistent beat, remaining at full opacity throughout the section while surrounding text changes — a technique used to anchor identity during the most narrative moments.

Where It Appears

Location	Beats	Purpose
Homepage Vajra Teaser	4 beats + CTA	Introduces the Vajra Pen mid-scroll; CTA links to the full product page
Vajra Pen Product Page	6 beats	Full cinematic sequence above the specifications, themed to the object’s heritage

The teaser’s call-to-action button fades in with its own scroll window and links to the full product page, where the complete six-beat sequence plays out above the specifications. This graduated reveal — from teaser to full sequence — creates a sense of

depth and reward for the engaged visitor.

06 · FEATURES

Feature Inventory

Beyond the cinematic sequences, the website incorporates a suite of features designed to elevate the experience and support the maison's operational needs. The following inventory catalogues the principal capabilities by category.

Interactive & Visual

- **Custom gold cursor** — a dot with a trailing ring that grows on hover over interactive elements; disabled on touch devices for native behaviour.
- **Scroll-progress indicator** — a slim gold bar at the top of the viewport reflects reading position throughout the site.
- **Film-grain overlay** — a subtle, fixed noise texture lends a cinematic, tactile quality across all pages.
- **Scroll-reveal animations** — content blocks fade and rise into view via IntersectionObserver, with staggered delays for visual rhythm.
- **Ken Burns parallax** — hero and section backgrounds employ slow zoom and parallax translation for depth.
- **Marquee ticker** — a continuous gold ticker of brand phrases sits beneath the hero, with edge fades.
- **Rotating SVG seal** — a circular text-path brand seal slowly rotates in the hero corner on desktop.

Commerce & Lead Capture

- **Private Enquiry form** — a validated form (name, email, phone, country, object of interest, message) posts to a dedicated API and persists each submission to the database, with a success state and toast confirmation.
- **Newsletter signup** — the footer form captures email subscriptions, de-duplicated via upsert, with its own success state.
- **Product quick-view dialogs** — homepage collection cards open a detailed modal with specifications and an enquiry call-to-action, keeping visitors in context.
- **Object-of-interest preselection** — enquiry forms default to the relevant product when reached from a product context.

Technical & Quality

- **Fully responsive** — mobile-first layout with no horizontal overflow at 390px; touch-friendly targets and a dedicated mobile navigation drawer.
- **Server-rendered routes** — each page is a server component with tailored metadata for SEO and social sharing.
- **Type-safe data layer** — product data, specifications, and heritage are defined in a shared TypeScript module, ensuring consistency across homepage cards and product pages.
- **Accessible semantics** — semantic HTML, ARIA labels, keyboard-navigable controls, and alt text throughout.
- **Optimised assets** — all imagery served as WebP; fonts loaded with display swap for fast first paint.
- **Lint-clean codebase** — the project passes ESLint with zero errors or warnings.

07 · TECHNOLOGY

Technology Stack

The project is built on a modern, production-grade stack chosen for performance, maintainability, and alignment with current best practices. Every dependency serves a specific purpose; no superfluous libraries are included.

Layer	Technology	Role
Framework	Next.js 16 (App Router)	Server rendering, routing, API routes, image optimisation
Language	TypeScript 5	Type safety across the data layer, components, and APIs
Styling	Tailwind CSS 4 + custom CSS	Utility-first layout plus bespoke luxury components (cursor, scrub, grain)
UI Library	shadcn/ui (New York)	Accessible primitives (toast, dialog, etc.) with Lucide icons
Database	Prisma ORM + SQLite	Schema-managed persistence for enquiries and newsletter subscriptions
Fonts	Cormorant Garamond + Jost	Editorial serif for display; geometric sans for labels and UI
AI Tooling	z-ai-web-dev-sdk	Used during build for content research (web reader) and image analysis (VLM)

The database schema defines two models: Enquiry (capturing full contact details, the object of interest, a status field for workflow management, and timestamps) and Newsletter (a deduplicated email registry). Both are accessed exclusively through validated API routes, which perform input sanitisation and return structured JSON responses. This separation keeps the data layer secure and testable, and allows the maison to integrate the captured leads into a CRM or email platform at a later stage without changes to the frontend.

08 · DEPLOYMENT

Deployment & Next Steps

Publishing to a Custom Domain

The website is ready for deployment to the maison' s domain. The recommended path is Vercel, the platform maintained by the creators of Next.js, which offers automatic builds, global edge distribution, and seamless custom-domain configuration. The process is straightforward: the project repository is connected to a Vercel project, the platform auto-detects the Next.js framework, and each push to the main branch triggers a production deployment. The custom domain (for example, xiinoon.in) is then added in the project' s domain settings, and the domain' s DNS records are updated to point to Vercel' s servers. SSL certificates are provisioned automatically.

Alternative platforms such as Netlify or self-hosting on a virtual private server are also viable. The choice of host should be weighed against the maison' s requirements for global latency, operational overhead, and the database considerations outlined below.

Database Considerations for Production

The project currently uses SQLite, a file-based database, which is ideal for development but not suitable for serverless production environments where the filesystem is ephemeral. Before going live, the database should be migrated to a hosted PostgreSQL service — Vercel Postgres, Supabase, and Neon all offer capable free tiers. The migration involves updating the Prisma schema' s provider, setting the production DATABASE_URL environment variable, and running the schema synchronisation command. The application code itself requires no changes, as all data access is abstracted through Prisma.

Recommended Next Steps

- **Content photography** — commission high-resolution photography of each object to replace the current imagery, ensuring consistency of lighting and background across the collection.
- **Cinematic product video** — produce short, looped product films for each object' s hero, enabling the video-background variant of the cinematic scrub across all product pages.
- **Analytics & insights** — integrate a privacy-respecting analytics platform to understand visitor journeys through the enquiry funnel.

- **CRM integration** — connect the enquiry API to the maison' s CRM so that submissions create leads automatically, with email notifications to the relevant team.
- **Content expansion** — develop dedicated Brand Story and Media pages further with editorial content, behind-the-atelier films, and press features.
- **Internationalisation** — should the maison address multiple markets, the architecture supports the addition of locale-specific routes and translated copy.

XII NOON does not follow time.
XII NOON defines it.
